A Solution to the Climate Crisis for Buildings

Richard Furman – Co Founder / CEO

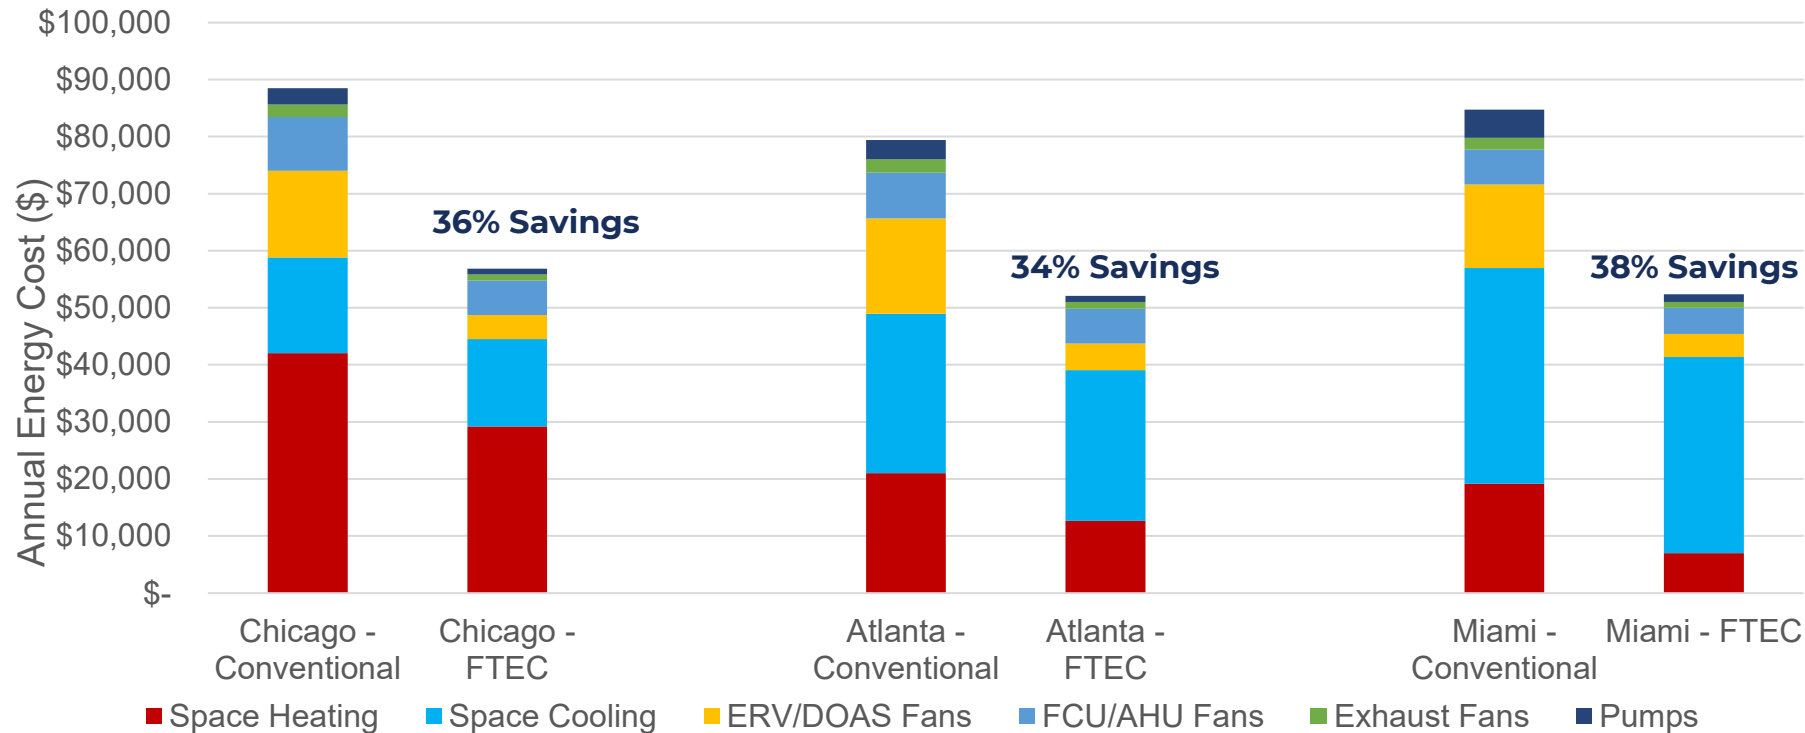

Zachary Thomas – Co Founder / COO

A Solution to the Climate Crisis for Buildings

- A more efficient HVAC System is needed to achieve zero CO₂ emissions with the minimum amount of renewable electricity.
- The solutions to the Climate Crisis will require both speed and scale.
- FT Energy Controls (FTEC) has developed a new HVAC system that makes use of HVAC equipment that is already available at scale and provided by many manufacturers.
- Independent engineering evaluations have determined that FTEC's new HVAC system:
 - **reduces energy costs by 36%,**
 - **reduces CO₂ emissions by 34%, and**
 - **reduces capital costs by 27%.**

Case Study: 200 Room Hotel

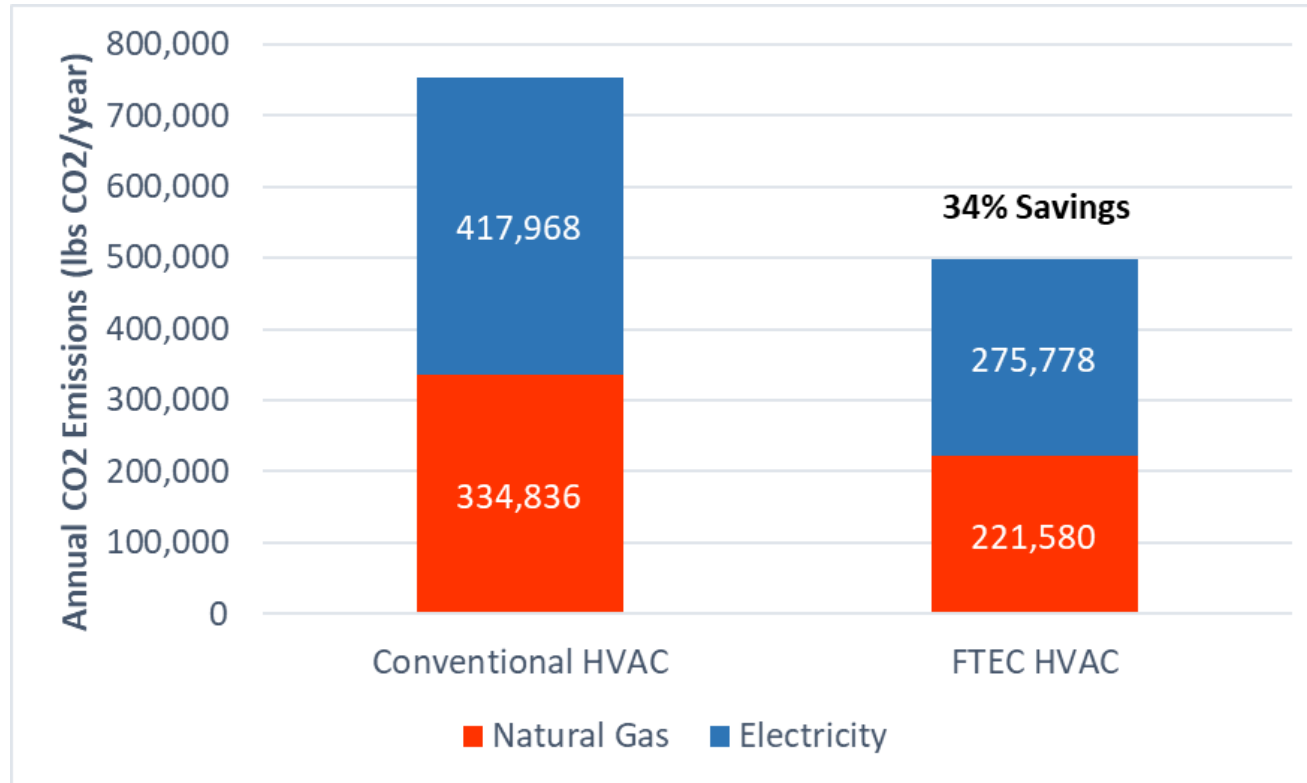

Comparison of Annual Energy Costs: Conventional System vs FTEC System (IES VE simulation)

- Study performed by Syska Hennessy, an expert energy modeling firm.
- The energy consumption for cooling, heating, all the fans and pumps are less for the FTEC system.

Case Study: 200 Room Hotel (Cont.)

Carbon Impact Using Existing Electricity and Natural Gas Supply: Conventional System vs FTEC System

assumptions: 0.855 lbs. CO₂ / Kwh; 12 lbs. CO₂ / therm

- FTEC's system reduces CO₂ emissions by 34% due to the increase in the efficiencies of the use of both electricity and natural gas.
- The current use of natural gas boilers can be replaced with electric heat pumps as more renewable electricity is available. This will provide an all-electric HVAC system which consist of electric heat pump chillers for cooling and electric heat pump heaters for heating.
- When this system is provided with 100% renewable electricity it will provide zero CO₂ emissions with the minimum amount of renewable electricity.

Case Study: 200 Room Hotel (cont.)

Comparison of Capital Costs: Conventional System vs FTEC System

Founders

Richard Furman – Co Founder / CEO
richard@ftenergycontrols.com

Previously Principal Consultant for New Energy Technologies, LLC where he assisted clients transitioning New Energy Technologies
MS ChE (MIT); BS ChE (WPI)

Zachary Thomas – Co Founder / COO
zach@ftenergycontrols.com

Electrical Engineer and Patent Attorney active in both professions.
PhD EE (MIT); MS EE (MIT);
JD (Suffolk Law); BS EE (Syracuse)

THANK YOU.
